This journal, representing the members of the Aerospace Medical Association and its component organizations, is published for those interested in aviation, space, environmental medicine, or human performance. It is devoted to serving and supporting all who explore, travel, work, or live in hazardous environments ranging from beneath the sea to the outermost reaches of space.

**AEROSPACE MEDICAL ASSOCIATION** is an organization devoted to charitable, educational, and scientific purposes. The Association was founded when the rapid expansion of aviation made evident the need for physicians with specialized knowledge of the flight environment. Since then, physicians have been joined in this Association by professionals from many fields and from many countries, all linked by a common interest in the health and safety of those who venture into challenging environments. Association members have contributed to the health and safety of the flying public, as well as to those who perform in the aerospace environment. Their efforts have led to pressurized aircraft, oxygen systems, anti-G suits, aeromedical evacuation procedures, fire-retardant interiors, human-engineered control systems and instrument panels, medical selection standards and personalized waivers, hyperbaric medicine, ejection seats, remote electronic monitoring, and many other innovations. Through national space programs Association members continue to provide the support systems for many successful space ventures. In fact, contributions by members of this Association are found wherever men and women dare to go.

**AVIATION, SPACE, AND ENVIRONMENTAL MEDICINE**, founded as the *Journal of Aviation Medicine* in 1930 by Louis H. Bauer, M.D., is published monthly by the Aerospace Medical Association, a non-profit charitable, educational, and scientific organization of physicians, physiologists, psychologists, nurses, human factors and human performance specialists, engineers, and others working to solve the problems of human existence in threatening environments on or beneath the Earth or the sea, in the air, or in outer space. The original scientific articles in this journal provide the latest available information on investigations into such areas as changes in ambient pressure, motion sickness, increased or decreased gravitational forces, thermal stresses, vision, fatigue, circadian rhythms, psychological stress, artificial environments, predictors of success, health maintenance, human factors engineering, clinical care, and others. This journal also publishes notes on scientific news and technical items of interest to the general reader, and provides teaching material and reviews for health care professionals.

**MEMBERSHIP**—The Aerospace Medical Association welcomes members interested in aviation, space, or environmental medicine.
