RESOLUTION 94-1

WHEREAS: The United States is a world leader in scientific biomedical space flight research; and

WHEREAS: The United States aeromedical space program has contributed major new understandings of human physiology and medicine that have led to new diagnostic tools; and

WHEREAS: The United States space research program has captured the minds of many youths, and has the potential to stimulate educational studies leading to careers in science and medicine; and

WHEREAS: The United States space station effort continues to enjoy the support of its international partners who have already invested heavily in the international space station program in accordance with prior U.S. commitments and agreements;

THEREFORE BE IT RESOLVED: That the Aerospace Medical Association recommends that the United States Executive Branch and the U.S. Congress strongly support the United States' leadership role in the expedient continued development and subsequent operation of the international space station.
